Research Internship Opportunity

At ASU’s College of Nursing and Health Innovation, we are seeking research assistants for large scale multiyear, National Institute on Minority Health and Health Disparities funded study. We want to see if a garden-based, physical activity, and healthy eating program, will improve physical activity and nutrition in pre-school aged children!

This is a great opportunity to fulfill a course-work learning requirement—2-3 credits of upper division independent study are available to interested students.

Get hands-on, mentored research experience to add to your resume for graduate school!

Your Involvement

Lead a fun intervention with pre-school aged children where you will taste fresh fruits and vegetables, and sing, dance, run, jump, and play active games. You can also learn how to do data collection, entry, analysis, and other ongoing research tasks.

Must be available between 11am-1pm on Mondays. Health-related, or Hispanic studies majors preferred!

For questions, contact Anel Arriola at a.arriola@asu.edu or at (602) 496-2011. Apply by visiting http://bit.ly/2mdCbWx
